COMMANDO SUPER DUTY 4WD SHOCK ABSORBERS

Australia has some of the most extreme driving conditions in the world. Commando Super Duty 4WD Shock Absorbers handle these conditions with ease, using either the "Nitro Gas" or the extra heavy duty "Foam Cell" versions, you can rest assured that your 4WD's suspension will give you first class performance both on and off road.

COMMANDO SUPER DUTY NITRO GAS

Commando Nitro Gas Shock Absorbers have a high performance twin tube construction with a 35mm bore size which is larger than most original factory fitted shock absorbers. They contain high pressure nitrogen gas and are fitted with three stage velocity valving which automatically adjusts to the driving conditions enabling comfortable driving on the bitumen and rapid adaption to off road conditions. Commando Nitro Gas Shocks are a great "all-rounder" recommended for four wheel drivers wanting better performance than they are getting from the original factory fitted shock absorbers.

KEY FEATURES

LARGE 35MM BORE SIZE & 65MM DUST SHIELD DIAMETER
3 STAGE VELOCITY VALVING WITH TOP QUALITY MULTI-LIP SEALS
GERMAN MADE SHOCK ABSORBER FLUID

COMMANDO SUPER DUTY FOAM CELL

If you are a serious four wheel driver and go off road regularly, then you need Commando Super Duty Foam Cell Shocks. With twin tube construction and a massive 40mm bore size containing 50% more oil than Commando Nitro Gas Shocks, Commando Foam Cell can handle the toughest off road conditions.

The foam cell insert in the shock absorber contains thousands of tiny cells which are impregnated with gas. This prevents the oil and gas in the shock absorber from cavitating due to the heat caused from the constant pounding of continuous four wheel driving. Cavitation or foaming causes the shock absorber oil/fluid to lose viscosity resulting in serious loss of performance, this is commonly called shock absorber fade. When shock absorbers fade they lose their ability to dampen the suspension, resulting in a very bouncy ride.

KEY FEATURES

MASSIVE 40MM BORE SIZE & 70MM DUST SHIELD DIAMETER
TRIED AND PROVEN FOAM CELL TECHNOLOGY
3 STAGE VELOCITY VALVING WITH TOP QUALITY MULTI LIP SEALS

Both Commando Nitro Gas and Foam Cell shocks are suitable for vehicles with suspension lifts up to 2". Commando shocks are also available for some Landcruisers and Patrols with 4" and 6" lift. Rubber bushes are also used meaning less annoying squeaks and groans during operation. Available for most 4WD's in Australia with new vehicle applications constantly being developed. With a 2 year / 40,000km warranty you can't go wrong!

Commando Super Duty 4WD shock absorbers are manufactured by CNSA and distributed in Australia by

AADi Australia 57 Meadow Avenue Coopers Plains QLD 4108
